

MMR – Machine Monitoring & Reporting

Our software for analyzing your machine data.

Economical, efficient and sustainable – these are the characteristics that every business needs to achieve today if it wants to exist in the future. To check the current performance data, woodworking shops rely on production KPIs. And that is precisely what our software for machine monitoring delivers. MMR (Machine Monitoring and Reporting) records machine times and statuses, stores data, and, with standardized KPIs, provides you with the optimal basis for decisions and optimization.

MMR Professional can be enabled via HOMAG function+ (for selected series from 05/2023).

Performance monitoring:

- Immediate clarity: In the usage overview, you can see straight away which machine requires your close attention
- The current status, general KPIs and performance data for each individual machine is displayed in a clear overview
- Simply assess the machines based on your individual target limits

Interval comparison:

- The interval comparison makes evaluating the machine over a certain period significantly easier
- Compare your machines over a defined period (shifts, days or weeks) with just a few clicks

Optimization potential:

- With the Gantt diagram, you can compare all machines at a glance
- You can see straight away which status each machine had and when
